## EYELINER AFTERCARE

---

Following your eye procedure your eyes may experience puffiness, redness and soreness. This is all normal. If you normally wear contact lenses it is advisable to wear glasses for the next two weeks to ensure you keep the area completely clean.

Please ensure you do not undertake any lash treatments for at least two weeks following the procedure.

Please ensure you do not wear any make up including mascara or use eyelash curlers for at least 14 days.

## GENERAL INFORMATION

---

All first treatments require a top up 4 to 12 weeks later. Top ups are not included in the initial treatment price - please check the current website for our latest price list. Failure to attend top ups will result in less than desired results and additional costs/charges.

In order to keep your permanent make up treatment in perfect condition a retouch is normally required every 12 to 30 months. This is dependent on your skin type, lifestyle, medication, skin factors and how you look after and retain the pigment.

To avoid pigment fading for as long as possible avoid excess sun exposure and use sunscreen with a minimum SPF 50.

If you are planning on having an MRI, a chemical peel or any skin or laser treatment, please ensure you inform your technician that you have had a permanent make up treatment.

Following a permanent make up procedure you should not be eligible to give blood for at least 6 months.

Please ensure if you have Botox or fillers in the area to be treated you wait at least two weeks before the treatment - for future reference.

If you have any questions please contact the salon via telephone or socials.

Thank you for choosing Pro Touch Beauty for your cosmetic procedure and we hope to see you again soon!

# PERMANENT MAKE UP AFTERCARE ADVICE

---

Please note it is your responsibility to correctly follow the aftercare advice. Only by following it correctly will you achieve good results. Please be patient with the healing process, it is not a quick process!

## COSMETIC PROCEDURES

---

An after-care ointment is provided for brow and lip procedures. Please ensure you wash your hands before and after applying the ointment. Ensure you use a clean cotton bud for each application and do not force the removal of scabs or flakes by picking, scratching or removing the pigment.

From days 2 to 6 after the treatment the treatment area may experience the following symptoms:

- Flaking, scabbing, tenderness, dryness and itchiness - this is all normal. The area may experience swelling and redness within 48 hours this is also normal.

Please do not do the following for 14 days:

- Use hot water on the area treated.
- Use soaps, cleansers, baby wipes, make up wipes or even scrub the pigmented area.
- Put make-up on the treated area.
- Use chlorine pools, Jacuzzis, steam rooms or saunas.
- Have hot, steamy, long showers or baths.
- Put any acid products or harsh skin care products on the pigmented area or around.
- Use sunbeds (try to avoid all sun exposure to the area).

Please ensure when you wash your hair, that you tilt your head back and ensure no water or products go onto the pigmented area and use luke warm water. You may have a visor included in your after-care bag. It is normal for the area to look lighter after 7 to 14 days as this is normally when all the flaking has stopped. The true colour will only then resurface by week 4. This is why a top up is required 4 to 12 weeks after the initial procedure. The top up includes retouching, adjusting the shape, adding more colour and making any alterations needed.

## EYEBROW AFTERCARE

---

From days 1 to 3, please clean and wipe your brows gently using cool boiled water and a cotton pad. Please ensure the cotton pad is only damp. Then apply a thin layer of the ointment provided after each cleansing session.

From day 4 only apply a thin layer on the brows once a day until the peeling process has stopped. This can be anywhere from day 4-14.

You can only then apply make up onto the treated area once the flakes have gone and the skin is healed. Everyone's healing process is different we cannot determine how long your skin will take to heal.

It is normal for the colour of the brows to look much darker from the second day. This is because the treatment area has began the healing process.

Brows normally fade by around 40% on the first session and then remember the colour will not be fully healed until week 4.

## LIP AFTERCARE

---

After your procedure you may experience swelling, burning, soreness, redness, irritation and flaking within 48 hours, this is all normal.

Please clean your lips after you have eaten or drank anything other than water, with cool boiled water and a cotton pad. Ensure you wipe gently and then apply a thin layer of the ointment provided. Please be careful when eating and drinking. You may want to drink through a straw and be careful when you brush your teeth.

If you suffer from cold sores, please ensure you take the same medication for at your top up to prevent an outbreak.

The true colour of the lips can take at least 6 weeks for the final healed results!
